Dover Chemical Corporation Announces Enhancements to Phosphite Operations

DOVER, OH — OCT. 26, 2009 — Dover Chemical Corporation has completed another phase of enhancements to its phosphite operations at the Dover, OH, facility. The improvements will increase Dover's ability to supply all phosphites, including Doverphos[®] Hi Pure TNPP.

"Recent improvements to Dover's phosphite operations enhance Dover's ability to supply our customers with all liquid and solid phosphites," stated Dover Chemical's President, Dwain Colvin. "We have seen a dramatic increase in demand for Doverphos Hi Pure TNPP due to its ecological advantage in being very low in nonylphenol, a perceived environmentally sensitive molecule," Mr. Colvin noted. "We believe that our regular TNPP is perfectly safe and is accepted globally as a food contact product, but Doverphos Hi Pure TNPP goes beyond the regulations and offers customers the closest product on the market to nonylphenol-free.

Our parent corporation, ICC Industries, continues to invest into Dover Chemical in an effort to meet emerging market demands. We are fortunate to have ownership with a long-term view of business rather than the short-term strategy of maximizing immediate shareholder value demonstrated by most large corporations today."

Dover Chemical Corporation is a subsidiary of privately held ICC Industries Inc., a global leader in the trading, manufacturing, and marketing of chemical, plastic, and pharmaceutical products (www.ICCChem.com). ICC, headquartered in New York City, was founded nearly sixty years ago as an international trading enterprise. Today, ICC's wholly-owned companies include fourteen manufacturing sites in the U.S. and two in Europe, as well as trading offices around the world. ICC is also the largest investor in Frutarom Industries Ltd., one of the top ten global companies in the field of flavors and fine ingredients for the food, beverage, flavor, fragrance, pharmaceutical, nutraceutical, and cosmetics industries.

Ohio-based Dover Chemical Corporation is a leading producer of polymer additives, liquid and solid chlorinated paraffins, liquid and solid antioxidants (including organophosphites), flame retardants and additives for water-based or oil-based coatings and metalworking fluids. Technical expertise includes amides, imides, esters, sulfurized products, chlorination, and lubricity. The company sells its products in North America from its headquarters location and globally through ICC Industries Inc. For more information, contact: Dover Chemical Corporation, 800-321-8805, or visit www.doverchem.com.
